

## CLAIMS

1. A transport securing arrangement for a side extension arm of a vehicle having a locking device and an additional securing hook, characterised in that the locking device is arranged in relation to the securing hook in such a way that release of the locking device leads to release of the securing hook from its anchorage.
2. A transport securing arrangement as set forth in claim 1 characterised in that the securing hook is supported pivotably.
3. A transport securing arrangement as set forth in claim 1 characterised in that there is provided a spring which urges the securing hook into the anchorage position.
4. A transport securing arrangement as set forth in claim 1 characterised in that the locking device is supported rotatably.
5. A transport securing arrangement as set forth in claim 4 characterised in that the locking device is releasable by rotation.
6. A transport securing arrangement as set forth in claim 5 characterised in that the locking device is releasable by rotation independently of the direction of rotation.
7. A transport securing arrangement as set forth in claim 4 characterised in that the locking device has at least one guide surface extending inclinedly relative to the longitudinal center line of the locking device, wherein upon rotation of the locking device the guide surface slides along a pin.
8. A transport securing arrangement as set forth in claim 1 characterised in that the locking device is urged in the direction of the locking position by a spring.

9. A transport securing arrangement as set forth in claim 1 characterised in that the securing hook partially bears against an eccentrically shaped portion of the locking device.
